"Two different mRNAs are transcribed from a single genomic locus
encoding the chicken erythrocyte anion transport proteins (band 3).";
Mol. Cell. Biol. 8:4416-4424(1988).
INTEGRAL DOMAIN BAND 3 IS THE MAJOR INTEGRAL GLYCOPROTEIN OF THE
ERYTHROCYTE MEMBRANE. BAND 3 HAS TWO FUNCTIONAL DOMAINS. ITS
INTEGRAL DOMAIN MEDIATES A 1:1 EXCHANGE OF INORGANIC ANIONS ACROSS
THE MEMBRANE, WHEREAS ITS CYTOOLASMIC DOMAIN PROVIDES BINDING
SITES FOR CYTOSKELETAL PROTEINS, GLYCOLYTIC ENZYMES, AND
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                -!- SUBDITT: A DIMER IN SOLUTION, IT SPANS THE MEMBRANE ASYMMETRICALLY AND APPEARS TO BE TETRAMERIC.
-!- SUBCELLULAR LOCATION: Integral membrane protein.

                                                                                TISSUE SPECIFICITY: Isoform a is widely expressed at similar levels in all tissues examined. Isoforms bl and b2 are predominantly expressed in stomach although they are also detected at lower levels in other tissues. Isoform c1 is stomach-specific. Isoform c2 is expressed at slightly higher levels in lung and stomach than in other tissues.
                                                                                                                                                                                                                                                                                                                    A HSSP, P01230; IBTU.

Biochim. Biophys. Acta 980:291-298(1989).
-!- FUNCTION: BAND 3 IS THE MAJOR INTEGRAL GLYCOPROTEIN OF THE
ERYTHROCYTE MEMBRANE. BAND 3 HAS TWO FUNCTIONAL DOMAINS. ITS
INTEGRAL DOMAIN MEDIATES A 1:1 EXCHANGE OF INORGANIC ANIONS ACROSS
THE MEMBRANE, WHEREAS ITS CYTOPLASMIC DOMAIN PROVIDES BINDING
                                                                                                                                                                                                                              SUBUNIT: A DIMER IN SOLUTION, IT SPANS THE MEMBRANE ASYMMETRICALLY ND APPERARS TO BE TETRAMERIC.
SUBCELLULAR LOCATION: Integral membrane protein.

Anion exchange protein 2 (Non-erythroid band 3-like protein) (B3RP).
SLC4A2 OR AE2 OR B3RP2.
Rattus norvegicus (Rat).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Kopito R.R.;

"Functional expression and subcellular localization of an anion exchanger cloned from choroid plexus.";

Proc. Natl. Acad. Sci. U.S.A. 87:5278-5282(1990).

-!- FUNCTION: PLASMA MEMBRANE ANION EXCHANGE PROTEIN OF WIDE DISTRIBUTION.

-!- SUBCELLULAR LOCATION: Integral membrane protein.

-!- SIMILARITY: BELONGS TO THE ANION EXCHANGER FAMILY.
                                                                                                                                                            ;
